

NEW TIMOR SEA ...

...NON-EXCLUSIVE 3D SEISMIC SURVEYS

Fugro has recently acquired new 3D seismic data in the Timor Sea. The Cartier survey consists of ~2770 km² with Cartier West covering ~520 km². A further ~730 km² has been acquired for Tiffany.

The primary objective for the Cartier survey is the productive Puffin Formation with secondary objectives of the Middle to Lower Jurassic aged Nome Formation and deeper Permian plays.

Cartier West and Tiffany are primarily targeting the Oxfordian Sandstones again with secondary objectives of the Jurassic aged Nome Formation.
