

# NEW ZEESTER 3D...

## ...NON-EXCLUSIVE SEISMIC SURVEY

Fugro is currently acquiring the Zeester 3D consisting of ~4,250 km<sup>2</sup> in the Roebuck Basin, Western Australia.

The Roebuck Basin is one of the least explored offshore regions of the North West Shelf. The Zeester 3D survey is designed to target numerous north-south oriented structures in the west and also cover the Bedout High structure in the north. This survey will compliment recently acquired 2D tie lines from the Phoenix 3D acquisition which highlighted a number of potential exploration targets.
